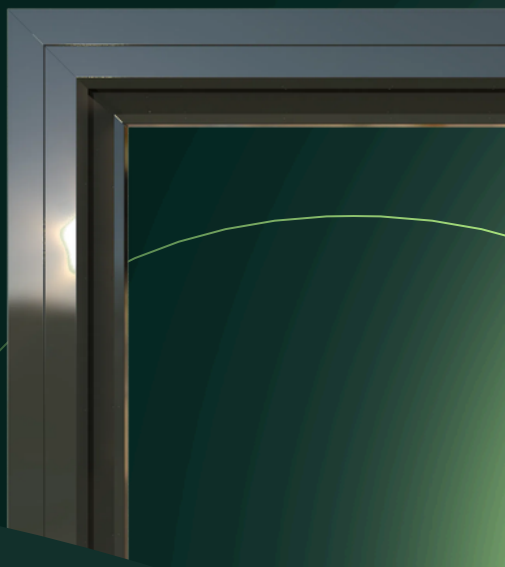
AirDoor

Reimagining the future of commercial entrances.

WHAT IS AIRDOOR?

AirDoor is an award-winning, innovative alternative to traditional overdoor heaters.

It creates an invisible, active air barrier that adapts in real-time to changing weather conditions – without heating or cooling.



AIRDOOR BENEFITS

Weather Protection

Active protection against wind, rain and unwanted outside air, delivering consistent comfort and efficiency right across the entrance while freeing up valuable space near the doorway.

Energy Efficiency

By limiting air infiltration at the entrance and retaining treated indoor air, AirDoor reduces energy loss and helps existing heating and cooling systems operate more efficiently.

Cost Savings

With no heating or cooling element, AirDoor delivers significantly lower running costs than traditional heated systems, offering a strong return on investment and lasting long-term savings.

Thermal Comfort

By maintaining consistent indoor temperatures and reducing cold draughts at the entrance, AirDoor creates a more comfortable environment for customers, staff and visitors.

Indoor Air Quality

AirDoor limits the entry of dust, pollutants and insects at the entrance, supporting cleaner indoor air and healthier conditions for occupants.

Sustainability

By reducing energy consumption and carbon impact at the entrance, AirDoor helps businesses cut emissions and supports net-zero ambitions without compromising comfort or performance.

AirDoor

OUR PRODUCTS

AirDoor

Our flagship entrance solution for commercial buildings that need to keep doorways open without compromising energy efficiency, comfort or performance.

AirDoor Lite

Our compact entrance solution in a pillar-based design without the need for a crossbeam, intended for buildings with overhead or architectural space constraints.

AirDoor Curve

Our solution for adjoining spaces in commercial buildings with different temperature requirements, using a twisted pillar design to keep hot and cold zones separate.
